# Design and Manufacture

WEDNESDAY, 1 MAY 1:00 PM – 2:45 PM

| ull name of ce | ntre |     | Town                 |               |
|----------------|------|-----|----------------------|---------------|
| orename(s)     |      | Sur | name                 | Number of sea |
| Date of bir    | th   |     | Scottish candidate r |               |

Total marks — 80

SECTION 1 — 60 marks

Attempt ALL questions.

SECTION 2 — 20 marks

Attempt ALL questions.

Write your answers clearly in the spaces provided in this booklet. Additional space for answers is provided at the end of this booklet. If you use this space you must clearly identify the question number you are attempting.

Use blue or black ink.

Before leaving the examination room you must give this booklet to the Invigilator; if you do not, you may lose all the marks for this paper.

Downloaded free from https://sqa.my/

# SECTION 1 — 60 marks Attempt ALL questions

1. A design proposal for a bathroom cabinet with a rotating mirror is shown below.

- (a) The back panel was made from a manufactured board.
  - (i) Name a suitable smooth manufactured board for the back panel.

|    |                                                    |
|    |                                                    |
|    |                                                    |

(b) The mirror was attached to a softwood frame. Mortise and tenon joints were used to join the sides of the frame together.

tenon marked out

tenon after being cut

(i) Describe how to mark out the tenon, with reference to workshop tools. 3 You may use sketches to illustrate your answer in the box below.

# (b) (continued)

The mortises were cut to a depth of 30mm using the mortise machine.

- (ii) Outline two ways to ensure the mortises were cut to the correct depth. 2
- (iii) Name an alternative woodwork joint for the softwood frame.

# (continued)

(c) An acrylic toothbrush holder was included inside the bathroom cabinet.

| Name a suitable drill bit that could be used to make the holes.                                    |  |  |
|----------------------------------------------------------------------------------------------------|--|--|
|                                                                                                    |  |  |
| Explain why the toothbrush holder should be drilled <b>before</b> forming into the curved shape.   |  |  |
| Outline <b>two</b> safety checks that should be carried out on the pillar drill prior to drilling. |  |  |
|                                                                                                    |  |  |
|                                                                                                    |  |  |
|                                                                                                    |  |  |

# (continued)

(d) The handle was made from a hardwood blank and turned to the shape shown below.

(i) Name a suitable hardwood for the handle.

| (ii) | Name a turning process carried out to reduce the diameter of the handle. |
|------|--------------------------------------------------------------------------|
|      |                                                                          |

| (iv) | Outline <b>two</b> ways of ensuring a high-quality finish on the handle when | _ |
|------|------------------------------------------------------------------------------|---|
|      | using the wood lathe.                                                        | 2 |

# (continued)

(e) The bracket was marked out on a sheet of mild steel as shown below.

(i) Describe how to mark out the rounded corners, with reference to workshop tools.

3

You may use sketches to illustrate your answer in the box below.

# 1. (e) (continued)

The bracket was bent to shape as show below.

(ii) Describe how to form the bend on the mild steel bracket, with reference to workshop tools.

2

You may use sketches to illustrate your answer in the box below.

(f) An internal thread was cut inside the cap.

| Describe <b>two</b> ways of ensuring a good quality thread is cut, with reference t workshop tools and equipment. |  |  |
|-------------------------------------------------------------------------------------------------------------------|--|--|
|                                                                                                                   |  |  |
|                                                                                                                   |  |  |
|                                                                                                                   |  |  |
|                                                                                                                   |  |  |
|                                                                                                                   |  |  |
|                                                                                                                   |  |  |
|                                                                                                                   |  |  |

2. A ring light and stand are shown below.

Research techniques such as user trips can be used to evaluate products. Outline three features of the ring light and stand that could be evaluated by carrying out a user trip.

3. Designers often use idea generation techniques to help them create new designs. A table from one of these techniques is shown below.

| Material | Colour      | Theme         | Number of legs |
|----------|-------------|---------------|----------------|
| Wood     | Primary     | Space         | 4              |
| Plastic  | Secondary   | Under the sea | l              |
| Metal    | Contrasting | Plants        | 3              |

| (a) | Name the idea generation technique that would use this type of table. | 1 |
|-----|-----------------------------------------------------------------------|---|
|     |                                                                       |   |
| (b) | Name an alternative idea generation technique.                        | 1 |
|     |                                                                       |   |

2

Graphics used in the design of a clapper board are shown below.

exploded view

You must give different reasons for (a)(i) and (a)(ii).

| a) | (i)  | Outline <b>two</b> reasons why a designer would use a <b>rendered pictorial</b> in the design process. |
|----|------|--------------------------------------------------------------------------------------------------------|
|    |      | You may refer to the graphic shown above.                                                              |
|    |      |                                                                                                        |
|    |      |                                                                                                        |
|    |      |                                                                                                        |
|    |      |                                                                                                        |
|    |      |                                                                                                        |
|    | (ii) | Outline <b>two</b> reasons why a designer would use an <b>exploded view</b> in the design process.     |
|    |      | You may refer to the graphic shown above.                                                              |
|    |      |                                                                                                        |
|    |      |                                                                                                        |
|    |      |                                                                                                        |

|     |                                                                                                                       |  |  |
|     |                                                                                                                       |  |  |

Designers and manufacturers should consider ways to make products more environmentally friendly.

| Outline <b>four</b> ways in which designers and manufacturers could reduce the impact of their products on the environment. |  |  |
|-----------------------------------------------------------------------------------------------------------------------------|--|--|
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |
|                                                                                                                             |  |  |

**10.** 3D printers are often used to manufacture products.

| Outline the benefits of using a 3D printer to create products. |  |  |
|----------------------------------------------------------------|--|--|
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |
|                                                                |  |  |

11. A mass manufacturing factory is shown below.

Standard components are often used in the mass manufacture of products.

| (a) | Outline two benefits of using standard components in products. |  |  |
