## General marking principles for National 5 Mathematics

*Always apply these general principles. Use them in conjunction with the detailed marking instructions, which identify the key features required in candidates' responses.*

*For each question, the marking instructions are generally in two sections:*

- *generic scheme – this indicates why each mark is awarded*
- *illustrative scheme – this covers methods which are commonly seen throughout the marking*

*In general, you should use the illustrative scheme. Only use the generic scheme where a candidate has used a method not covered in the illustrative scheme.*

- (a) Always use positive marking. This means candidates accumulate marks for the demonstration of relevant skills, knowledge and understanding; marks are not deducted for errors or omissions.
- (b) If you are uncertain how to assess a specific candidate response because it is not covered by the general marking principles or the detailed marking instructions, you must seek guidance from your team leader.
- (c) One mark is available for each •. There are no half marks.
- (d) If a candidate's response contains an error, all working subsequent to this error must still be marked. Only award marks if the level of difficulty in their working is similar to the level of difficulty in the illustrative scheme.
- (e) Only award full marks where the solution contains appropriate working. A correct answer with no working receives no mark, unless specifically mentioned in the marking instructions.
- (f) Candidates may use any mathematically correct method to answer questions, except in cases where a particular method is specified or excluded.
- (g) If an error is trivial, casual or insignificant, for example  $6 \times 6 = 12$ , candidates lose the opportunity to gain a mark, except for instances such as the second example in point (h) below.

- (h) If a candidate makes a transcription error (question paper to script or within script), they lose the opportunity to gain the next process mark, for example

This is a transcription error and so the mark is not awarded.	$x^2 + 5x + 7 = 9x + 4$
This is no longer a solution of a quadratic equation, so the mark is not awarded.	$x - 4x + 3 = 0$
	$x = 1$

The following example is an exception to the above

This error is not treated as a transcription error, as the candidate deals with the intended quadratic equation. The candidate has been given the benefit of the doubt and all marks awarded.	$x^2 + 5x + 7 = 9x + 4$
	$x - 4x + 3 = 0$
	$(x - 3)(x - 1) = 0$
	$x = 1 \text{ or } 3$

(i) **Horizontal/vertical marking**

If a question results in two pairs of solutions, apply the following technique, but only if indicated in the detailed marking instructions for the question.

Example:

	• <sup>5</sup>	• <sup>6</sup>
• <sup>5</sup>	$x = 2$	$x = -4$
• <sup>6</sup>	$y = 5$	$y = -7$

Horizontal: • <sup>5</sup> $x = 2$ and $x = -4$	Vertical: • <sup>5</sup> $x = 2$ and $y = 5$
• <sup>6</sup> $y = 5$ and $y = -7$	• <sup>6</sup> $x = -4$ and $y = -7$

You must choose whichever method benefits the candidate, **not** a combination of both.

- (j) In final answers, candidates should simplify numerical values as far as possible unless specifically mentioned in the detailed marking instruction. For example

$\frac{15}{12}$ must be simplified to $\frac{5}{4}$ or $1\frac{1}{4}$	$\frac{43}{1}$ must be simplified to 43
$\frac{15}{0.3}$ must be simplified to 50	$\frac{4/5}{3}$ must be simplified to $\frac{4}{15}$
$\sqrt{64}$ must be simplified to 8*	

\*The square root of perfect squares up to and including 100 must be known.

(k) Commonly Observed Responses (COR) are shown in the marking instructions to help mark common and/or non-routine solutions. CORs may also be used as a guide when marking similar non-routine candidate responses.

(l) Do not penalise candidates for any of the following, unless specifically mentioned in the detailed marking instructions:

- working subsequent to a correct answer
- correct working in the wrong part of a question
- legitimate variations in numerical answers/algebraic expressions, for example angles in degrees rounded to nearest degree
- omission of units
- bad form (bad form only becomes bad form if subsequent working is correct), for example

$(x^3 + 2x^2 + 3x + 2)(2x + 1)$  written as

$(x^3 + 2x^2 + 3x + 2) \times 2x + 1$

$= 2x^4 + 5x^3 + 8x^2 + 7x + 2$

gains full credit

- repeated error within a question, but not between questions or papers

(m) In any ‘Show that...’ question, where candidates have to arrive at a required result, the last mark is not awarded as a follow-through from a previous error, unless specified in the detailed marking instructions.

(n) You must check all working carefully, even where a fundamental misunderstanding is apparent early in a candidate’s response. You may still be able to award marks later in the question so you must refer continually to the marking instructions. The appearance of the correct answer does not necessarily indicate that you can award all the available marks to a candidate.

(o) You should mark legible scored-out working that has not been replaced. However, if the scored-out working has been replaced, you must only mark the replacement working.

(p) If candidates make multiple attempts using the same strategy and do not identify their final answer, mark all attempts and award the lowest mark. If candidates try different valid strategies, apply the above rule to attempts within each strategy and then award the highest mark.

For example:

Strategy 1 attempt 1 is worth 3 marks.	Strategy 2 attempt 1 is worth 1 mark.
Strategy 1 attempt 2 is worth 4 marks.	Strategy 2 attempt 2 is worth 5 marks.
From the attempts using strategy 1, the resultant mark would be 3.	From the attempts using strategy 2, the resultant mark would be 1.

In this case, award 3 marks.

<b>Notes:</b>				
1. Correct answer without working			award 3/3	
2. Where an incorrect percentage is used, the working must be followed through to give the possibility of awarding 2/3 eg $80\,000 \times 0.15^3 = 270$			award 2/3 $\times \checkmark \checkmark$	
3. Where an incorrect power ( $\geq 2$ ) is used, the working must be followed through to give the possibility of awarding 2/3 eg $80\,000 \times 1.15^2 = 105\,800$ , $80\,000 \times 1.15^4 = 139\,920(.5)$ or 139 921			award 2/3 $\checkmark \times \checkmark$	
4. Where division is used				
(a) along with 1.15, • <sup>1</sup> is not available eg $80\,000 \div 1.15^3 = 52\,601(.2\dots)$			award 2/3 $\times \checkmark \checkmark$	
(b) along with an incorrect percentage, • <sup>1</sup> and • <sup>2</sup> are not available eg $80\,000 \div 0.85^3 = 130\,266(.6\dots)$ or 130 266			award 1/3 $\times \times \checkmark$	
<b>Commonly observed responses:</b>				
1. $80\,000 \times 1.015^3 = 83\,654(.27)$			award 2/3 $\times \checkmark \checkmark$	
2. $80\,000 \times 0.85^3 = 49\,130$			award 2/3 $\times \checkmark \checkmark$	
3. $80\,000 \times 1.15 = 92\,000$			award 1/3 $\checkmark \times \times$	
4. $80\,000 \times 1.15 \times 3 = 276\,000$			award 1/3 $\checkmark \times \times$	
5. $80\,000 \times 0.15 = 12\,000 \rightarrow 80\,000 + 3 \times 12\,000 = 116\,000$			award 1/3 $\checkmark \times \times$	
6. $80\,000 \times 0.15 \times 3 = 36\,000$			award 0/3

8. Alternative acceptable strategy:				
• <sup>1</sup> $\left(\frac{o}{h}\right)^2 + \left(\frac{o}{h}\right)\left(\frac{a}{h}\right) + \left(\frac{a}{h}\right)\left(\frac{o}{h}\right) + \left(\frac{a}{h}\right)^2$				
• <sup>2</sup> $\left(\frac{o}{h}\right)^2 + 2\left(\frac{o}{h}\right)\left(\frac{a}{h}\right) + \left(\frac{a}{h}\right)^2 = 1 + 2 \sin x \cos x$			award 2/2	
<b>Commonly observed responses:</b>				
1. $(\sin x + \cos x)^2 = \sin^2 x + \cos^2 x = 1$			award 0/2	
2. $(\sin x + \cos x)^2 = \sin^2 x + \sin x \cos x + \cos^2 x = 1 + \sin x \cos x$			award 1/2 $\times\checkmark$

18.	<ul style="list-style-type: none"> <li>•<sup>1</sup> marshal facts and recognise right-angled triangle</li> <li>•<sup>2</sup> consistent Pythagoras statement</li> <li>•<sup>3</sup> calculate radius of larger circle</li> <li>•<sup>4</sup> calculate CD</li> </ul>	<ul style="list-style-type: none"> <li>•<sup>1</sup> </li> <li>•<sup>2</sup> <math>7 \cdot 5^2 + 7 \cdot 5^2</math></li> <li>•<sup>3</sup> <math>10 \cdot 6 \dots</math></li> <li>•<sup>4</sup> <math>25 \cdot 6 \dots (\text{cm})</math></li> </ul>	4

**Notes:**

1. Correct answer without working award 0/4.
2. In the absence of a diagram, or a diagram without right angle indicated, accept  $7 \cdot 5^2 + 7 \cdot 5^2$  as evidence for the award of •<sup>1</sup> and •<sup>2</sup>.
3. **BEWARE**  
Where a diagram is shown, working must be consistent with the diagram.
4. •<sup>2</sup> and •<sup>3</sup> are available for a valid trigonometric method.
5. •<sup>3</sup> is available for a consistent calculation of a length using Pythagoras or trigonometry
6. •<sup>4</sup> is only available following a Pythagoras (or trigonometric) calculation within a right-angled triangle involving 7.5 or 15.
7. Disregard errors due to premature rounding provided there is evidence.

**Commonly observed responses:**

1. [Triangle SBT with  $SB = ST = 15$ ]  $r^2 = 15^2 + 15^2 \rightarrow r = 21 \cdot 2 \rightarrow CD = 51 \cdot 2$ 
  - (a) working inconsistent with correct diagram award 3/4 ✓x✓✓
  - (b) working consistent with candidate's diagram award 3/4 x✓✓✓
  - (c) no diagram award 2/4 xx✓✓
2. [Square with side AB]  $d^2 = 15^2 + 15^2 \rightarrow r = 10 \cdot 6 \rightarrow CD = 25 \cdot 6$   
If consistent with a correct diagram award 4/4; otherwise apply COR 1 MIs
3. [Triangle ATB]  $r^2 + r^2 = 15^2 \rightarrow r = 10 \cdot 6 \rightarrow CD = 25 \cdot 6$   
Apply MIs and Note 2 becomes accept  $r^2 + r^2 = 15^2$  as evidence for the award of •<sup>1</sup> and •<sup>2</sup>

<p><b>Notes:</b></p> <p>1. Correct answer without working <span style="float: right;">award 0/5.</span></p> <p>2. Do not penalise omission of degrees signs.</p> <p>3. Disregard errors due to premature rounding provided there is evidence. However, do not accept sin34, sin52 or sin94 rounded to less than 3 decimal places.  eg <math>BM = \frac{350 \sin 52}{\sin 94} = \frac{275 \cdot 8}{0 \cdot 99} = 275 \cdot 59 \rightarrow h = 275 \cdot 59 \sin 34 = 155 \cdot 8</math> <span style="float: right;">award 4/5 ✓✓x✓✓</span></p> <p>4. Where both BK and BM are calculated but one is calculated incorrectly, if there is  (a) further working then apply the MIs based on the length used to calculate the height  (b) no further working disregard incorrect length ie <span style="float: right;">award 3/5</span></p> <p>5. Alternative strategy for <math>\bullet^4</math> and <math>\bullet^5</math>  eg <math>\bullet^4</math> <math>A = \frac{1}{2} \times 350 \times 196(\cdot 195 \dots) \times \sin 52 (= 27055 \dots)</math>  <math>\bullet^5</math> <math>\frac{1}{2} \times 350 \times h = 27055 \dots \rightarrow h = 154 \cdot 6</math></p> <p>6.
